policy evaluation:

| ⑤ target	opt	policy	sites	avg	var	...	sites	avg	var
					0 ...~~6~~ 1...6		summary		

Evaluation of different policies, sites are grouped
by their actual (<u>clang</u>!) param_count

sites ← number of callsites   targets/site
avg ← average (mean) number of ~~callsites~~
var ← variance in number of targets/site

<u>policies</u>:
$$\left.\begin{array}{l} count^* \\ type^* \\ |^* \end{array}\right\}$$
"perfect" policies also
assume 100% precision
0% recall
in classification

count ← our approx of the paper policy
count-ext ← our enhanced version of the paper policy
type ← "type" (witness) based policy
